

## CASE STUDIES

Casterbridge fisheries Ltd

### Project

Weed removal

### Location

Damerham Trout fishery, Hampshire.

### Job description

A very smart corporate Trout fishing venue in the heart of Hampshire.

They called us in for two days, to tackle a weed problem that was not only unsightly but left one of their lakes totally unfishable.

With the aid of our cutting chains, we were able to cut through the Canadian pond weed that was growing in a thick tangled mess from the bed of the lake, once cut this floats to the surface mixing with the mass of Blanket weed, then using a weed net we were able to net all the cut weed into one area to be removed from the lake.

A particularly rewarding job over a very hot two days.

When we arrived the lake was completely unfishable.

When we left two days later, the lake was completely fishable.
